## Executive Summary

**T**he Central Jackson County Fire Protection District provides fire protection, emergency medical services, fire fighting services and hazmat and water rescue services to more than 70,000 residents across 52 sq. miles.

In our analysis, we have found that the district's population since 2000 has increased by 27.3 percent and the number of incidents have increased by 30 percent.

We strongly believe that the Central Jackson County Fire Protection District evaluate relocating current deployment assets, construct new fire stations or a combination of both. Considering the population during the next decade as well as growth patterns, there would be a service gap of 17,578 persons by 2028. As the population in the district ages, it is probable that demand for the emergency medical services provided by the district will continue to increase.

More than 70 percent of all service calls are medical in nature. Again, as the district's population ages, demand for those services should increase proportionately. Since 2003, the number of persons receiving Social Security Insurance payments has nearly doubled and the total amount of payments made to recipients have nearly tripled. The aging of the Central Jackson County Fire Protection District patrons will continue to make the services the CJCFPD provide even more important in the years to come.

## Key Findings

- Between 2000 and 2018, the population in the Central Jackson County Fire Protection District increased by 27.3 percent. (see p. 10)
- The fire district's 2018 population is aging at a rapid pace compared with the 2000 Census population. By 2028, the number of persons over 60 years old is expected to be 18,269. This is 33 percent more than what we have living in the district today. In the 2000 Census, only 29.8 percent of the population was older than 45 years old. By 2028, it is projected to be 42.5 percent of the population. (see p. 12-15)
- Based on the projected increase in population in the district, we estimate that the number of incidents in the district will increase from 7,819 in 2018 to between 8,542 to 8,761 by 2023 to 8,920 to 9,162 by 2028. (see p. 14)
- An analysis of incidents responded to by the CJCFFPD indicated that more than 70 percent of all calls were medical in nature. Other emergency calls account for 25.9 percent of all incidents. (see p. 45)
- By 2028, demographic data shows that the district's population could reach 77,433, an increase of 6,243 persons or 8 percent. This rate of growth would be in line with the national population rate growth between 2000 and 2010, which was 9 percent overall. (see p. 14)
- About one-third of the adult residents of the CJCFFPD are not in the workforce (see p. 26). Residents of Eastern Jackson County have higher-than-average incidences of Alzheimer's Disease, heart disease and congestive heart disease. (see p. 27-29). Since 2003, the number of persons receiving Social Security Insurance payments has nearly doubled and the payments made to recipients have nearly tripled. (see p. 37).
- Our analysis shows that there are several areas of concern for District leadership. Relocating assets or the construction of new fire stations will be needed to serve the future needs of the District. (see p. 74-79)

### Reason for the Study

**T**he Central Jackson County Fire Protection District (CJCFFPD) is located in Eastern Jackson County, Missouri, just east of the Kansas City metropolitan area. The district covers 52 sq. miles. The Central Jackson County Fire Department was formed in 1960, including Lake Tapawingo and the City of Blue Springs. In 1981, Grain Valley joined the district. Presently, the district staffs five stations, has 108 firefighters, and 16 administrators and staff. The district's mission has always been to save lives, protect property and preserve the environment.

In July 2019, district's board asked our firm to conduct a study of where the district's population was increasing, and analyze its incident data for the last four years.

The district intends to use the data collected and presented in this study to not only evaluate how adequately it is serving the present district, but to also appropriately plan for future growth, and better account for the needs created by an increase in the community populations.

## Demographics in the CJCFPD

# Central Jackson County Fire Protection District

## Population:

Population in Central Jackson County Fire Protection District has increased from 55,907 residents in 2000 to 71,188 persons by 2018. This is a 27.3 percent increase in population; statewide the population during the same timeframe increased by only 3.4 percent. The population older than 60 years old has increased from only 5,974 in 2000 to 13,702 in 2018, an increase of 129 percent.

Since the Census Bureau does not compile data based on fire protection districts, these estimates come from using raw Census data and overlapping the district's boundary in a commercial GIS application. This method will have a small error, but is the most accurate process available to estimate population in the fire district.

Age Cohorts in the Central Jackson County Fire Protection District: 2000 Census, 2012-2016 ACS and 2018 Estimated														
Age	2018 Estimated Population				2012-2016 American Community Survey Data				2000 Census		Overall Change 2012 > 2018	Overall % Change 2012 > 2018	Overall Change 2000 > 2018	Overall % Change 2000 > 2018
	Number			Percent	Number			Percent	Number	Percent

**Figure 3. 2000 Census and 2012-2016 ACS Data with estimated 2018 totals for the Central Jackson County Fire Protection District, by age cohorts, and compared to changes in the state overall.**

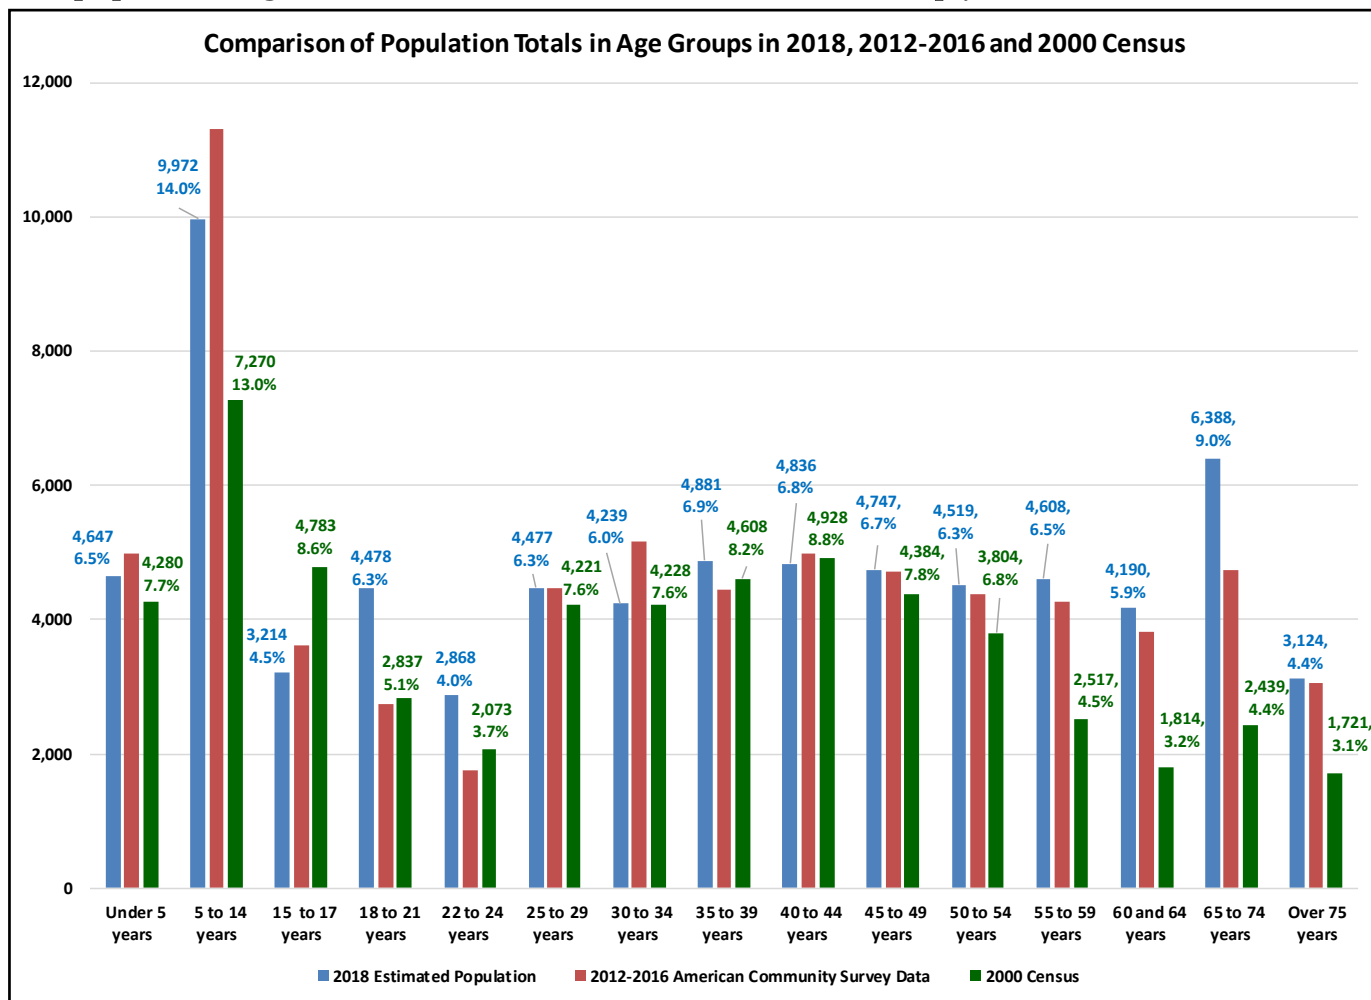

Figure 4. Area municipalities within and near the Central Jackson County Fire Protection District.

# Central Jackson County Fire Protection District

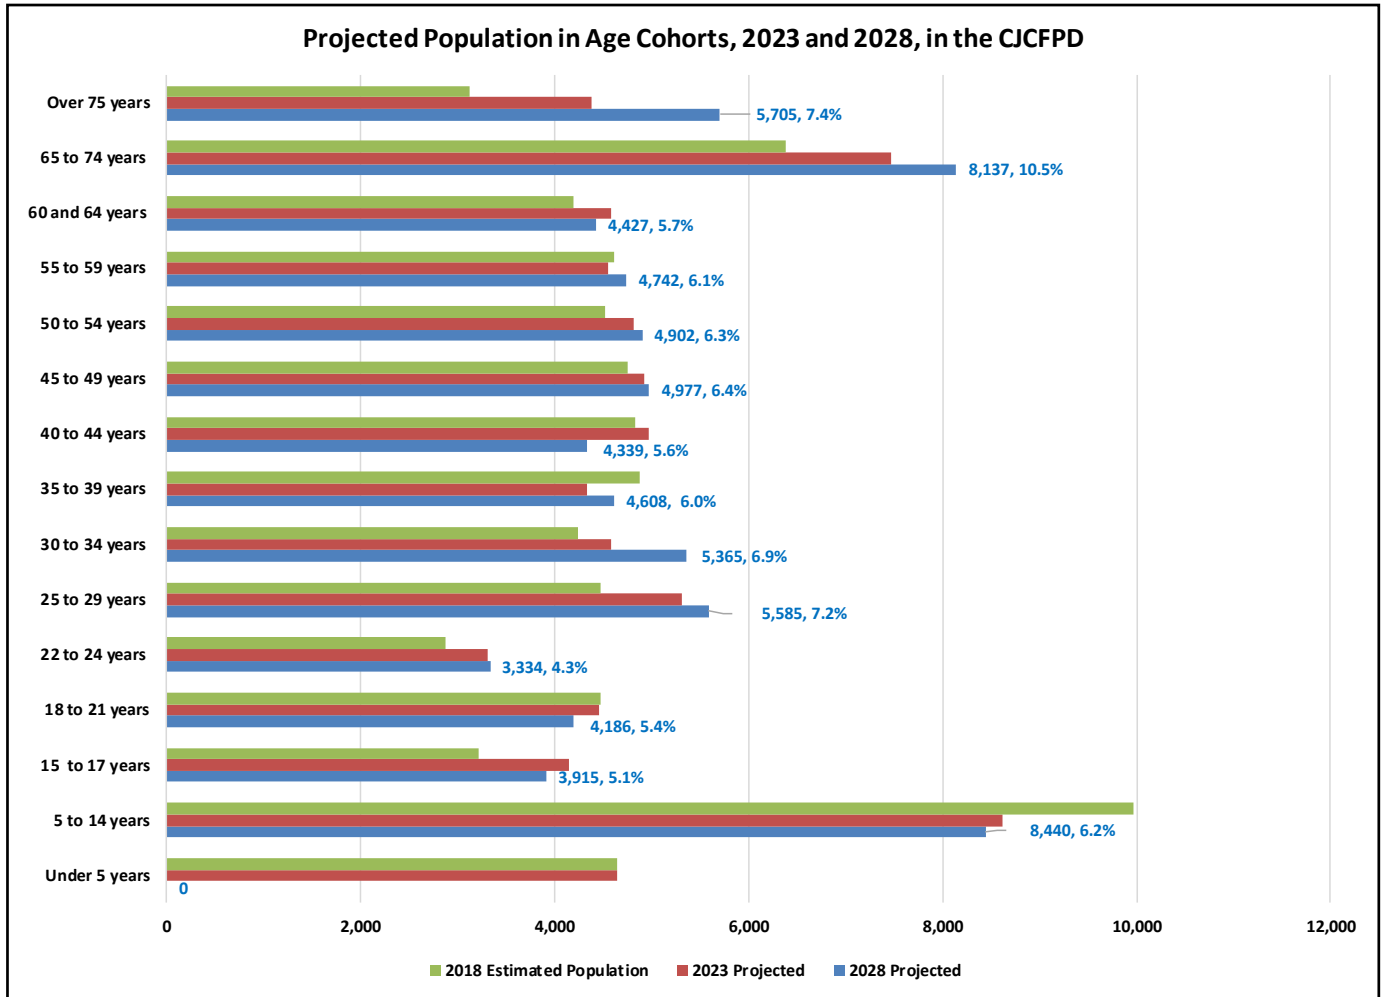

The charts and table on these two pages, illustrate how the population in the fire district is aging at a rapid pace compared with the 2000 Census population. In Figure 6, below, the blue bars represent the estimated 2018 population in each age cohort. Notice how in each group from 45 years old and older, the blue bar is taller than the other two. The childbearing-ages of 18 to 44 are holding their own, with the 2018 numbers close to or a bit higher than the other two. However, there is a big drop in the number of children living in the district currently, from the 2012-2016 estimate. Since a majority of incidents the CJCFPD currently responds is for emergency medical services, it is probable that as the population ages demand for this service will increase sharply.

**Figure 5. Distribution by age cohorts and by percentage in the Central Jackson County Fire Protection District, for the 2000 Census, 2012-2016 ACS, and estimated 2018 population.**

# Demographic and Service Analysis

By 2028, the number of persons over 60 years old is expected to be 18,269. This is 33 percent more than what we have living in the district today. Figure 5 shows that in the 2000 Census, only 29.8 percent of the population was older than 45 years old. By 2028, it is projected to be 42.5 percent of the population.

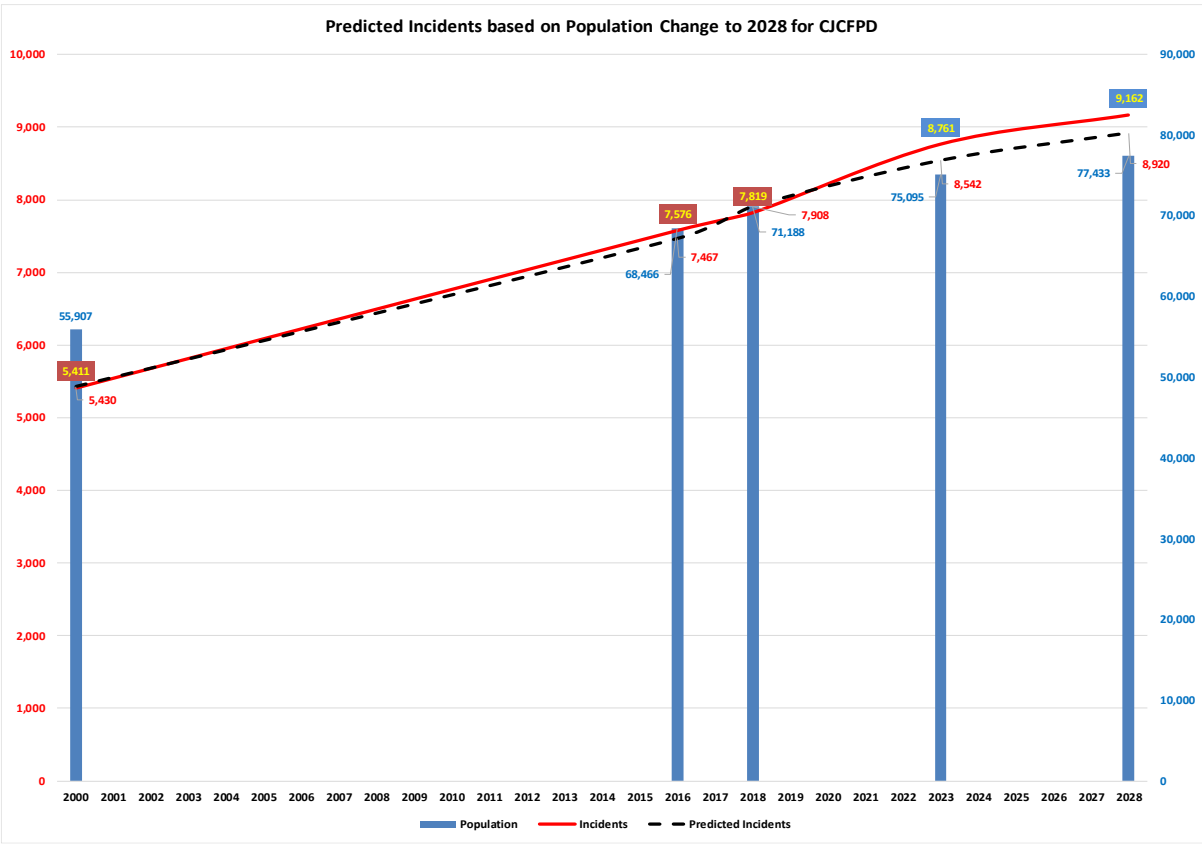

**Figure 6. Distribution by age cohorts and percentage in the Central Jackson County Fire Protection District, population estimated for 2018, projected to 2023 and 2028.**

# Central Jackson County Fire Protection District

We used two models to predict how many annual calls for assistance by 2028. The red numbers are based on a growth model, using the projected population; this model shows as many as 8,920 incidents could occur by 2028. Similar results were obtained using a linear regression model (shown in the blue boxed yellow numbers), indicating total annual calls could be as high as 9,162 incidents by 2028. We have had limited data points in this analysis, which could cause error to increase. Additionally, the district is actively engaged in call-reduction programs. The potential impact of these programs on either predictive model is unknown.

**Figure 7. Predicted incidents based on population change in the Central Jackson County Fire Protection District, estimated 2028 population. There are two models shown on this graph. The red numbers show an estimated number of incidents based on a simple linear model. The boxed yellow numbers show the number of incidents based on a regression model. The blue bars and the right-hand axis show the changes in population. (The red line for actual incidents are predicted after 2018 using a linear model.)**

# Demographic and Service Analysis

Figure 8. Change in percentage of total population, by cohorts, 2000-2028, in CJCFPD.

# Central Jackson County Fire Protection District

The CJCFFPD is unique in that it has large areas of dense population that would be similar to a metropolitan area, a few scattered urban areas and large rural and even a few wilderness areas. This means that the district has to be able to respond to widely diverse levels of development. Figure 9, below, shows that about half the district is rural and more than a third is metropolitan. The locations of the current stations, shown as black dots, indicate a solid level of service to the metropolitan areas, with the exception of north Highway 7.

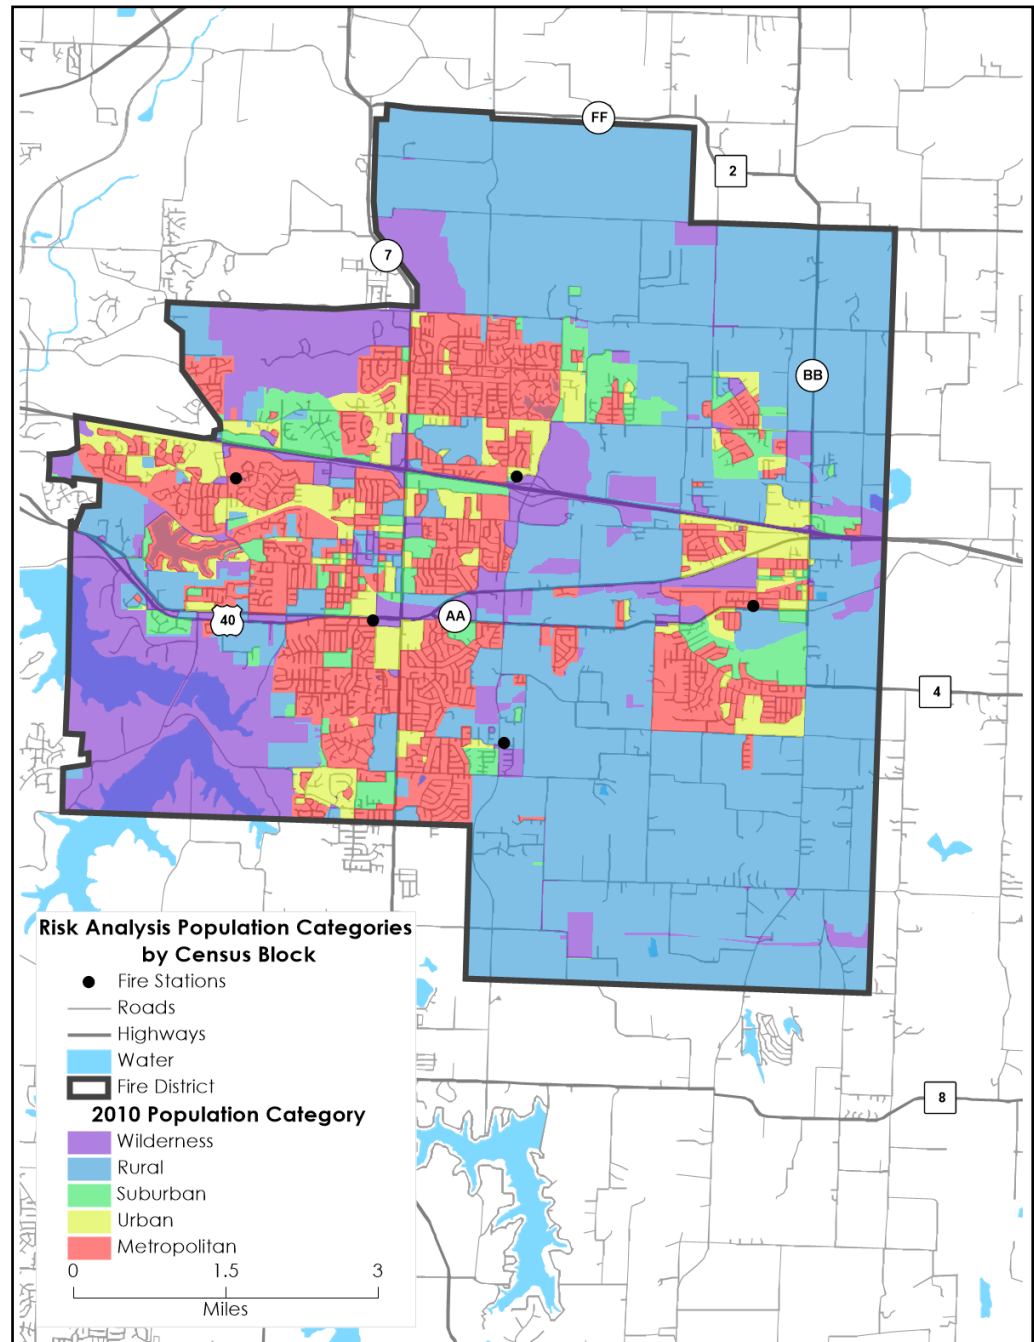

Figure 9. These areas were determined by calculating the population percentage of each Census block, summing those areas to find a total district population, and dividing by the district area in square miles.

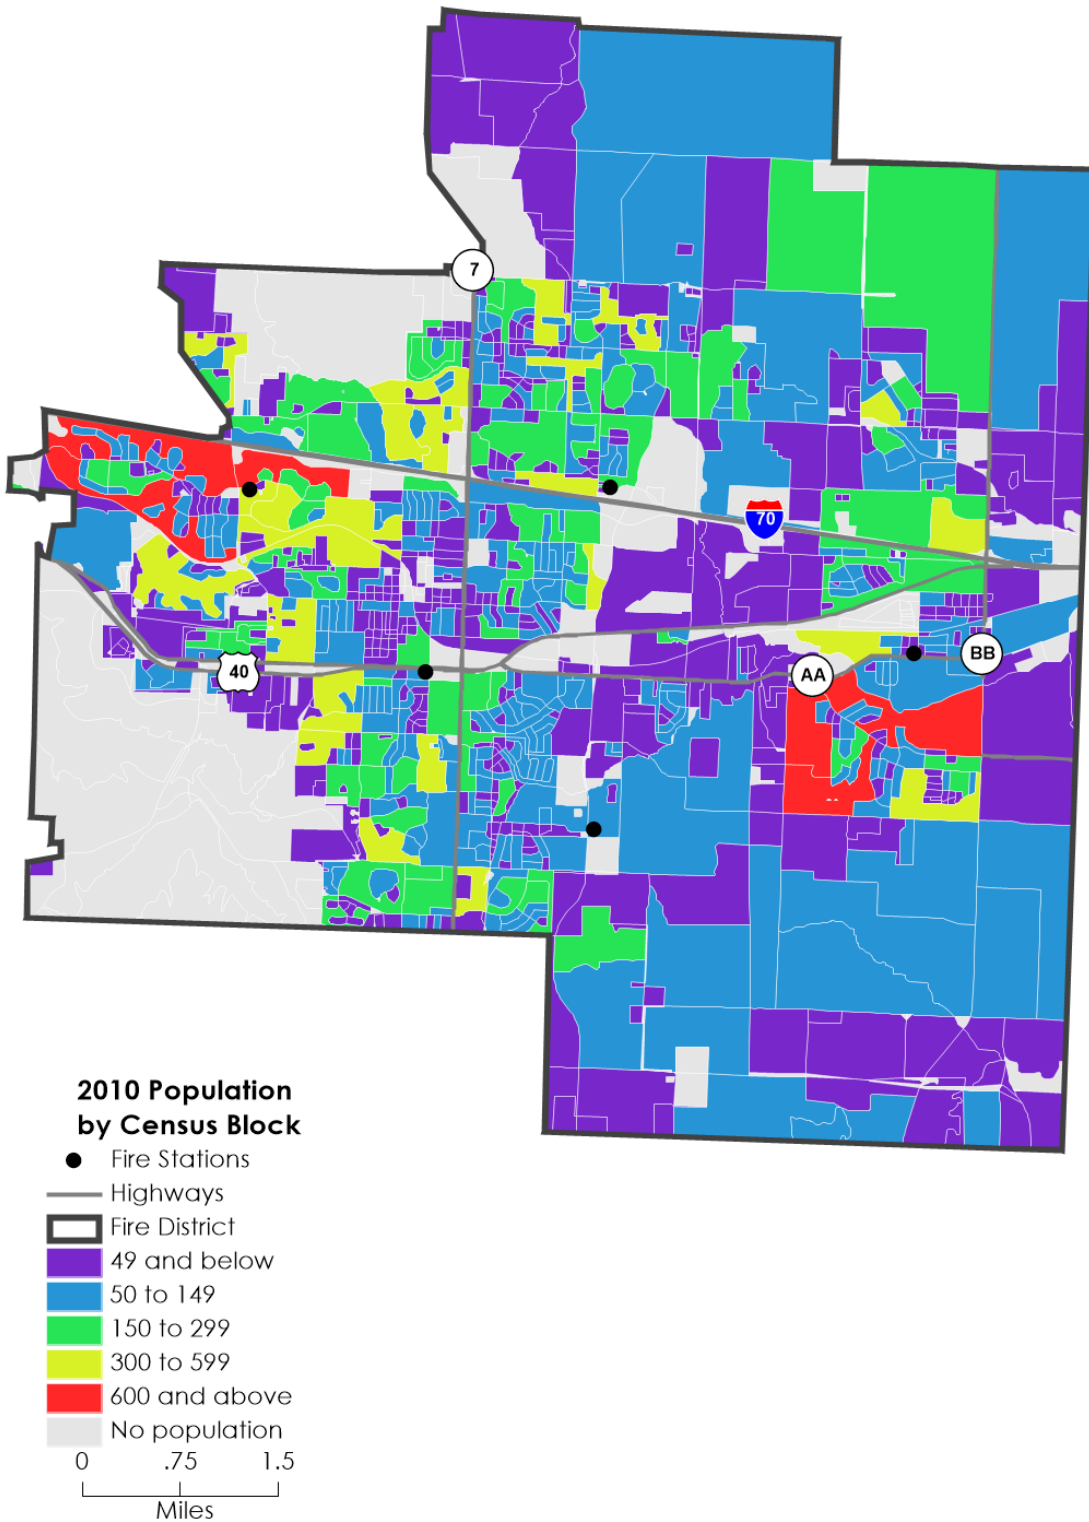

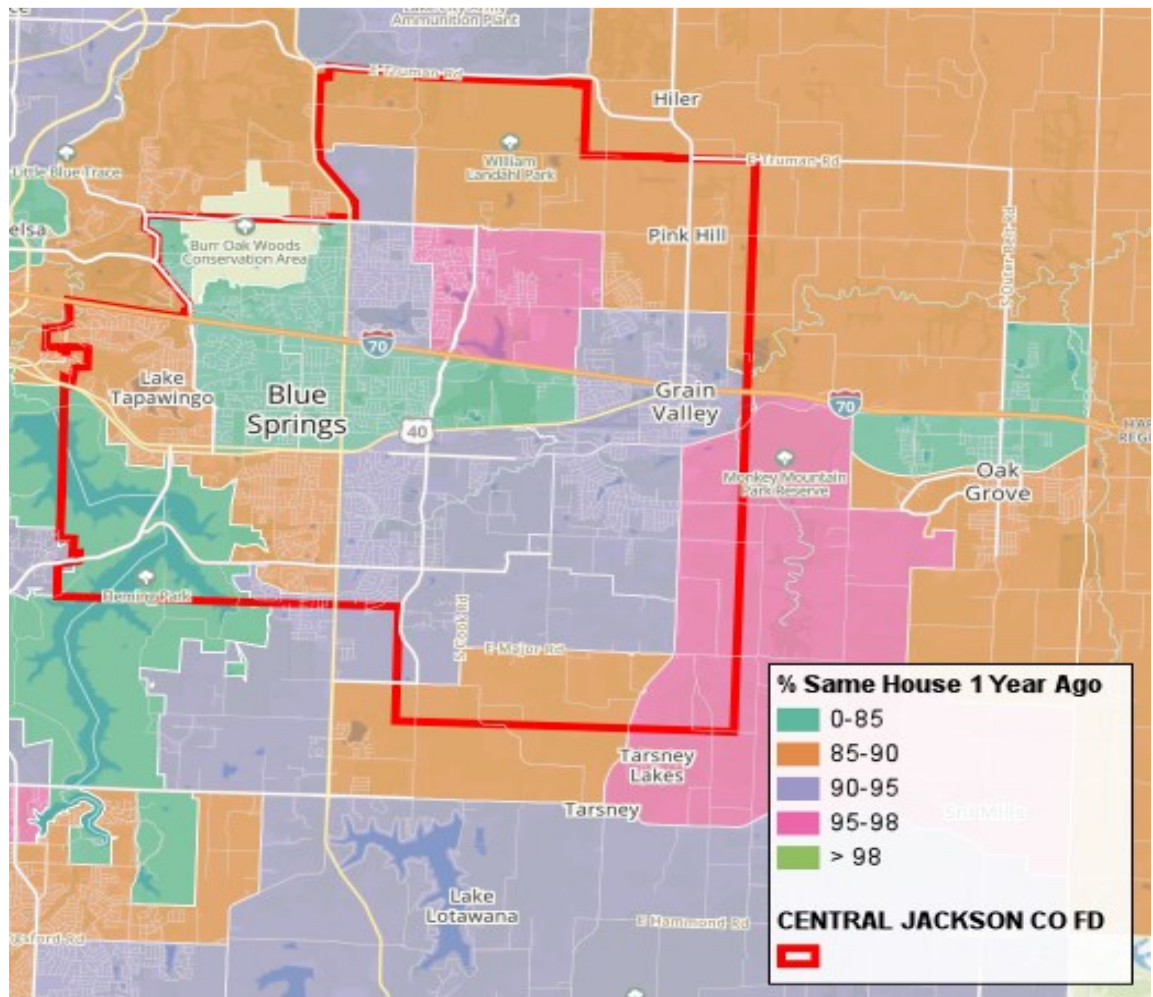

Figure 10. Population density in the Central Jackson County Fire Protection District, 2010 Census.

# Central Jackson County Fire Protection District

The blue areas of the map in Figure 11 show areas that had increases of more than 50 new persons who moved into the district during the last year. There is a large swath through the middle of the district where the population is growing, but about half the district in the northern and southern parts have lost population during the last year.

Figures 12 and 13 on p. 19, show the increases in the number of residential building permits in Blue Springs and Grain Valley since 2005. The Heartland MLS data service provided a decade of house sales for Eastern Jackson County. Included in these house sales would also be new construction, which can be estimated from the chart that shows the building permits.

**Figure 11. The level of population migration in the CJCFPD during 2018. A large swath on both sides of I-70 indicate as much as 85 percent of the residents were living in the same house as a year ago. That means that as high as 15 percent of the persons living in this year were not living there a year ago. That is a higher-than-average migration rate. The pink areas show where there is virtually no migration into or out.**

Figures 12-13. Top, house sales in Eastern Jackson County during the last decade. Bottom, residential building permits in the City of Blue Springs and Grain Valley, 2005-2018.

# Central Jackson County Fire Protection District

The CJCFFPD is comprised of 27 Census block groups, which is one of the primary ways that the Census Bureau segregates data, as shown in Figure 15. On p. 21, Figure 15, shows the smallest area, Census blocks, where data is aggregated. There are 1,353 Census blocks in the CJCFFPD.

All the maps in this study are based on data aggregated by block groups for simplicity to see the comparisons. As you can see in Figure 14, below, some of the block groups extend beyond the boundaries of the CJCFFPD but the data totals for those blocks would be calculated within the district's boundaries.

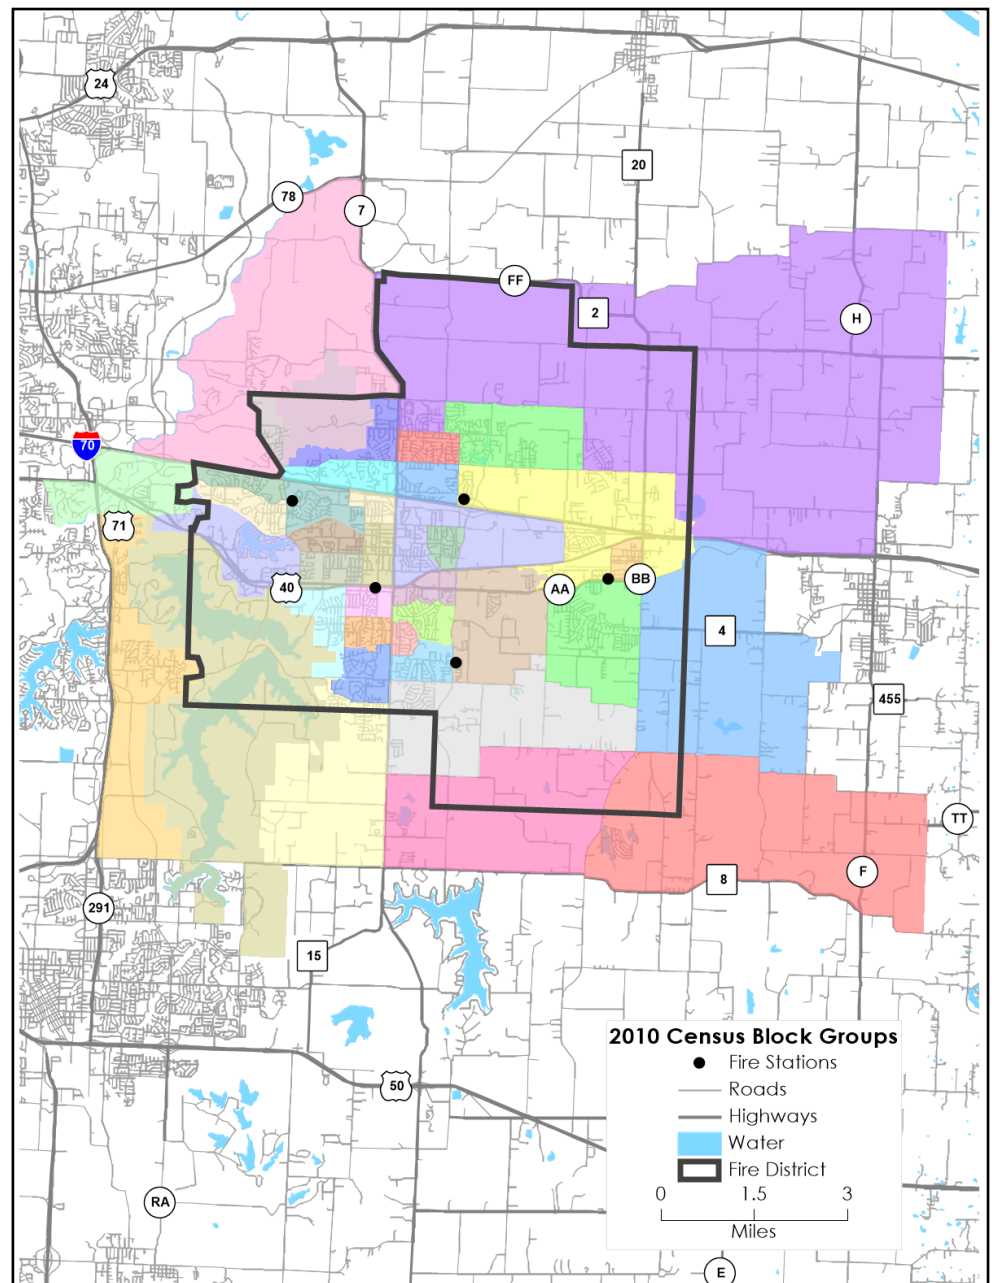

Figure 14. 2010 Census block groups in the CJCFFPD.

# Central Jackson County Fire Protection District

## Eastern Jackson County Health Information Data Profiles:

With the population in the CJCFPD aging in large numbers, this section focuses on the types of diseases prevalent in the district. About one-third of persons living in the district are not in the work force, which in this strong economy, would likely point to retirement. Figure 20, below, shows that most of the Census block groups have more than 588 persons in each one who are not in the work force. Data from the state Department of Health and Senior Services show health data for Eastern Jackson County, which would include the CJCFPD. Medical services comprise a major part of the services delivered by the district, and during the next 10 years, as the number of elderly persons increase in the district, medical services will make up even more incidents.

**Figure 20. Not working is often an indicator of retirement. This map shows the percentage of how many persons 25 years old and older are in the workforce, and where they live. The green areas show where as high as 30 percent of the residents are not in the workforce. Given the strength of the local economy, the high non-participation percentage would more likely indicate retirement or nursing home residency.**

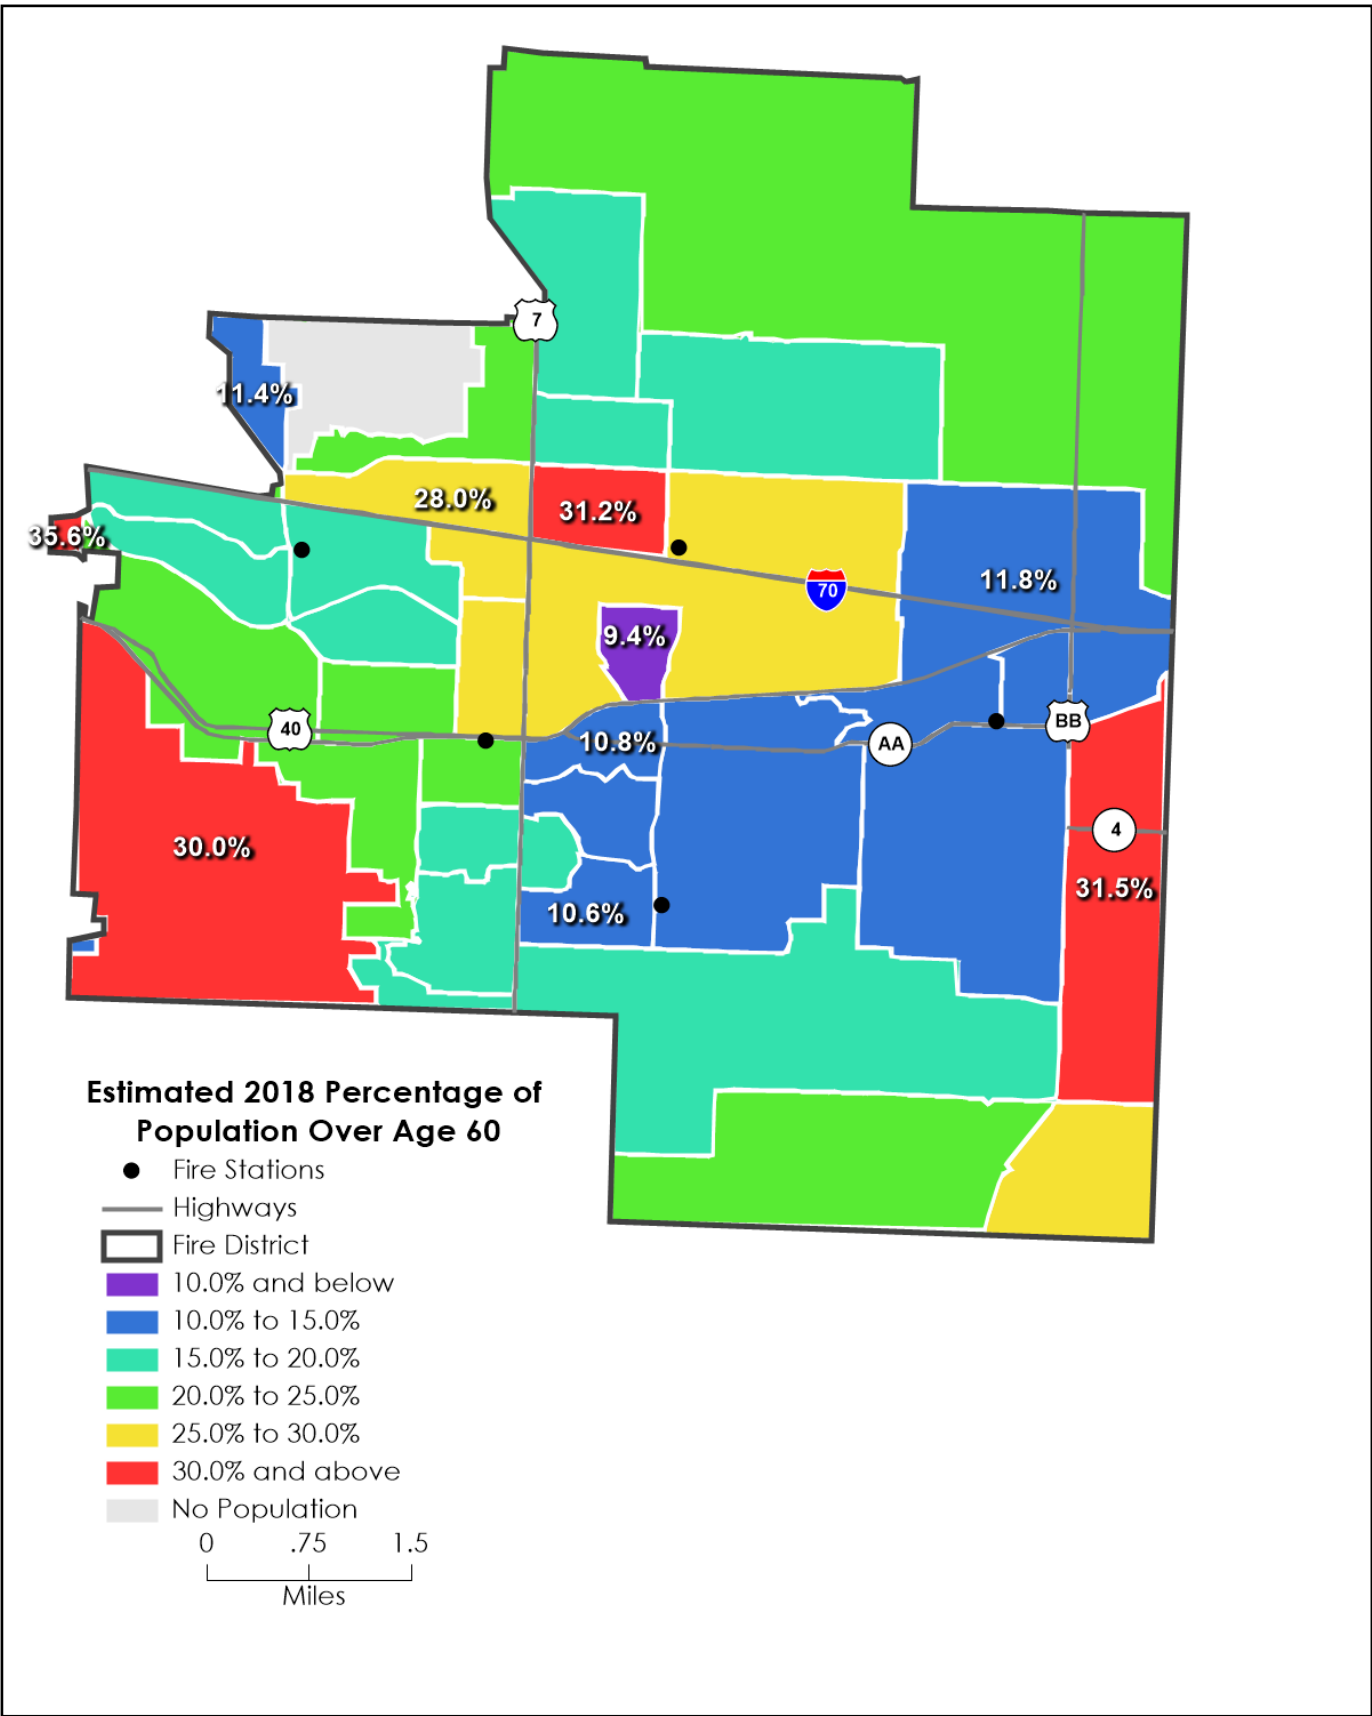

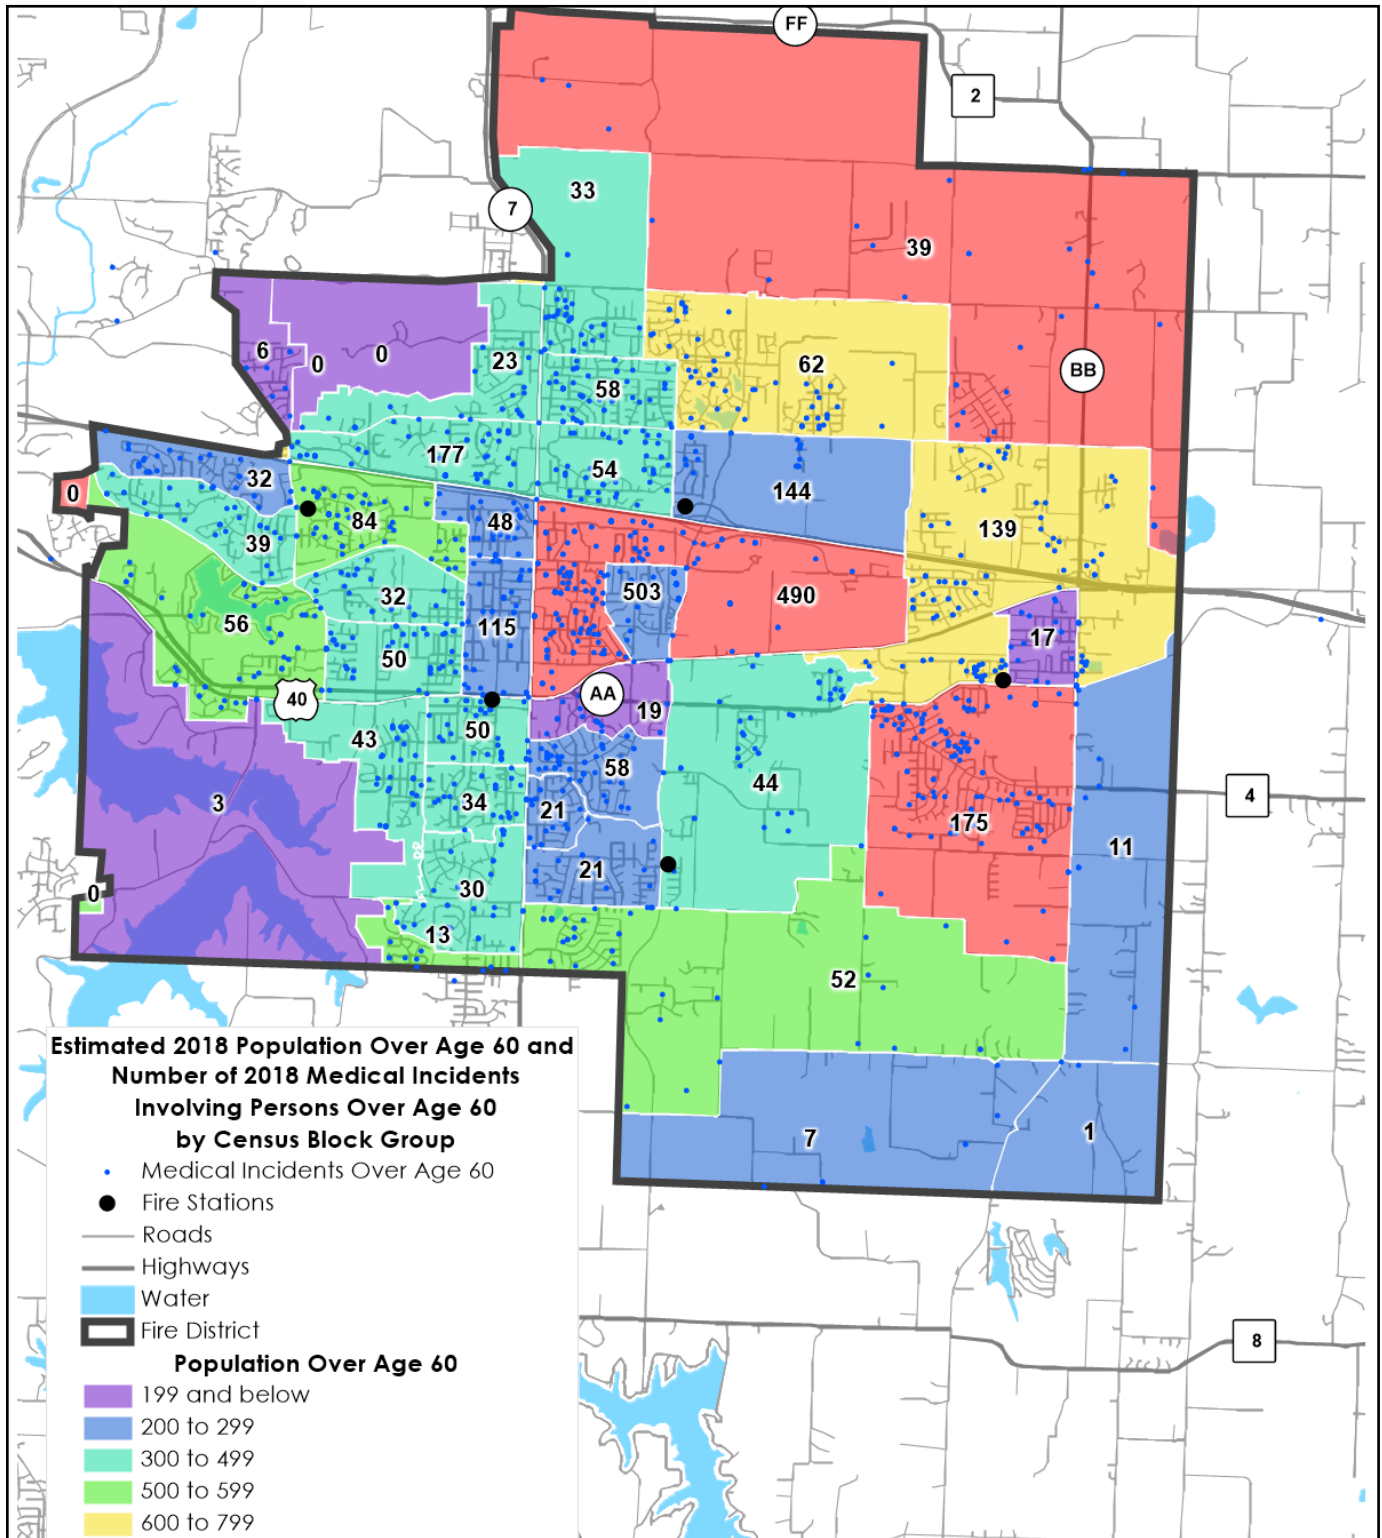

Figure 25. Estimated 2018 Percentage of population over age 60 in CJCFPD.

**Figure 26. Estimated 2018 Population over age 60 and number of medical incidents in CJCFFPD.** The map is based on actual CJCFFPD data that was geocoded and then summed by Census block. The shading on the map shows the number of persons over 60 years old based on our demographic data. The numbers show the number of medical incidents. (The specific codes used to produce this map are: 300, 311, 320, 321, 322, 323, 324, 331, 340, 350, 353, 354 and 381.)

# Demographic and Service Analysis

We analyzed the CJCFPD incident data two different ways. First, there was a total of 72,616 incidents if all apparatus that responded on an incident are counted. (The analysis on the apparatus, starting on p. 112 include all the records.) However, for the analysis of types of incidents, we eliminate the duplicate vehicle records, and worked with 36,972 unique incidents, which are shown on this page.

The table and pie chart on this page shows that medical incidents account for 74 percent of all the district's incidents. Other calls account for 26.3 percent of all incidents.

## **Response and Drive Time Detailed Analysis in the CJCFPD**

# Central Jackson County Fire Protection District

---

We conducted a drive time analysis to determine where in the district can be reached from the station in four minutes or less, a common national standard in fire departments. A GIS software application was used to model all roads that can be driven in the given time period, based on speed limits. Time ranges from zero to 10 minutes were indicated across the district, as shown in Figure 60.

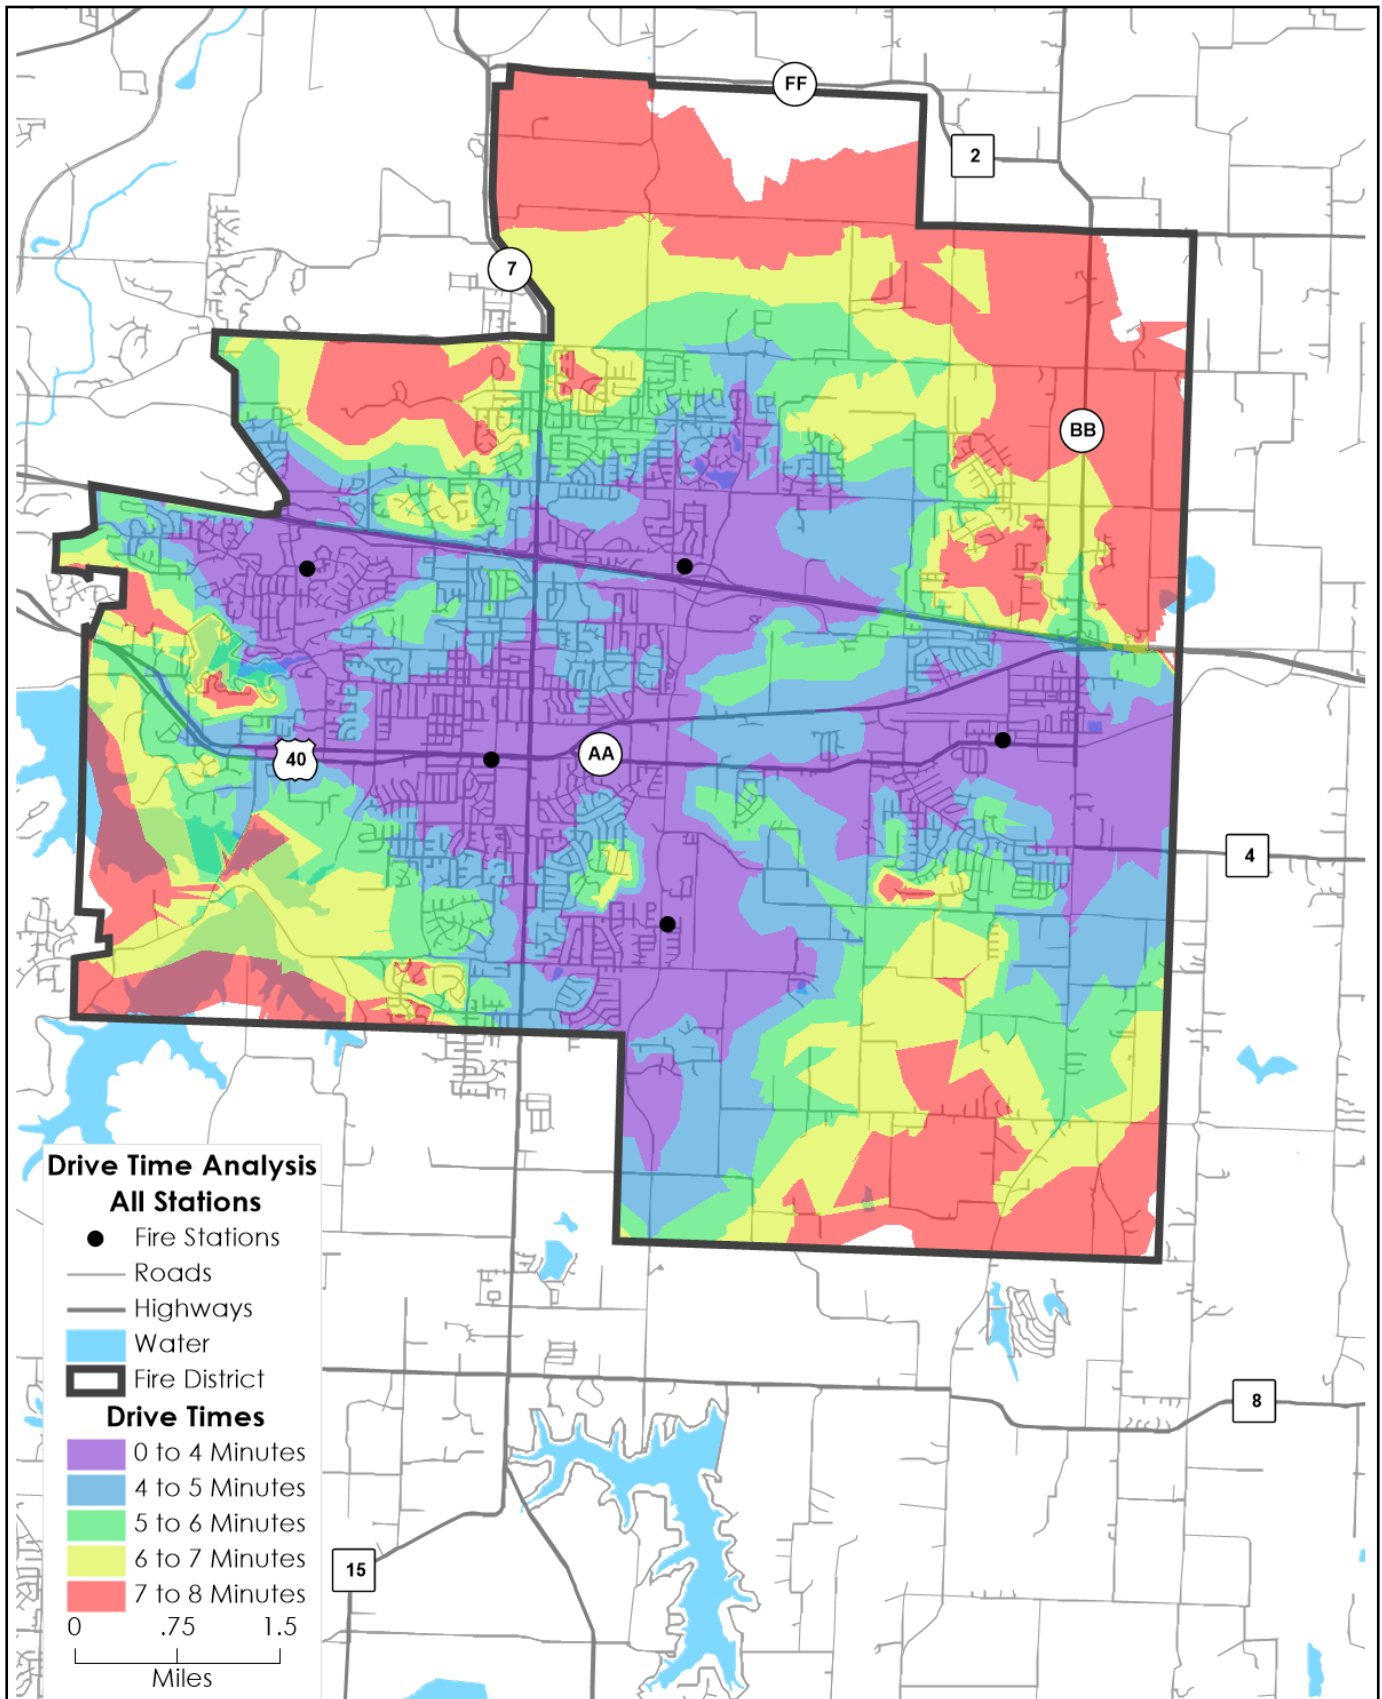

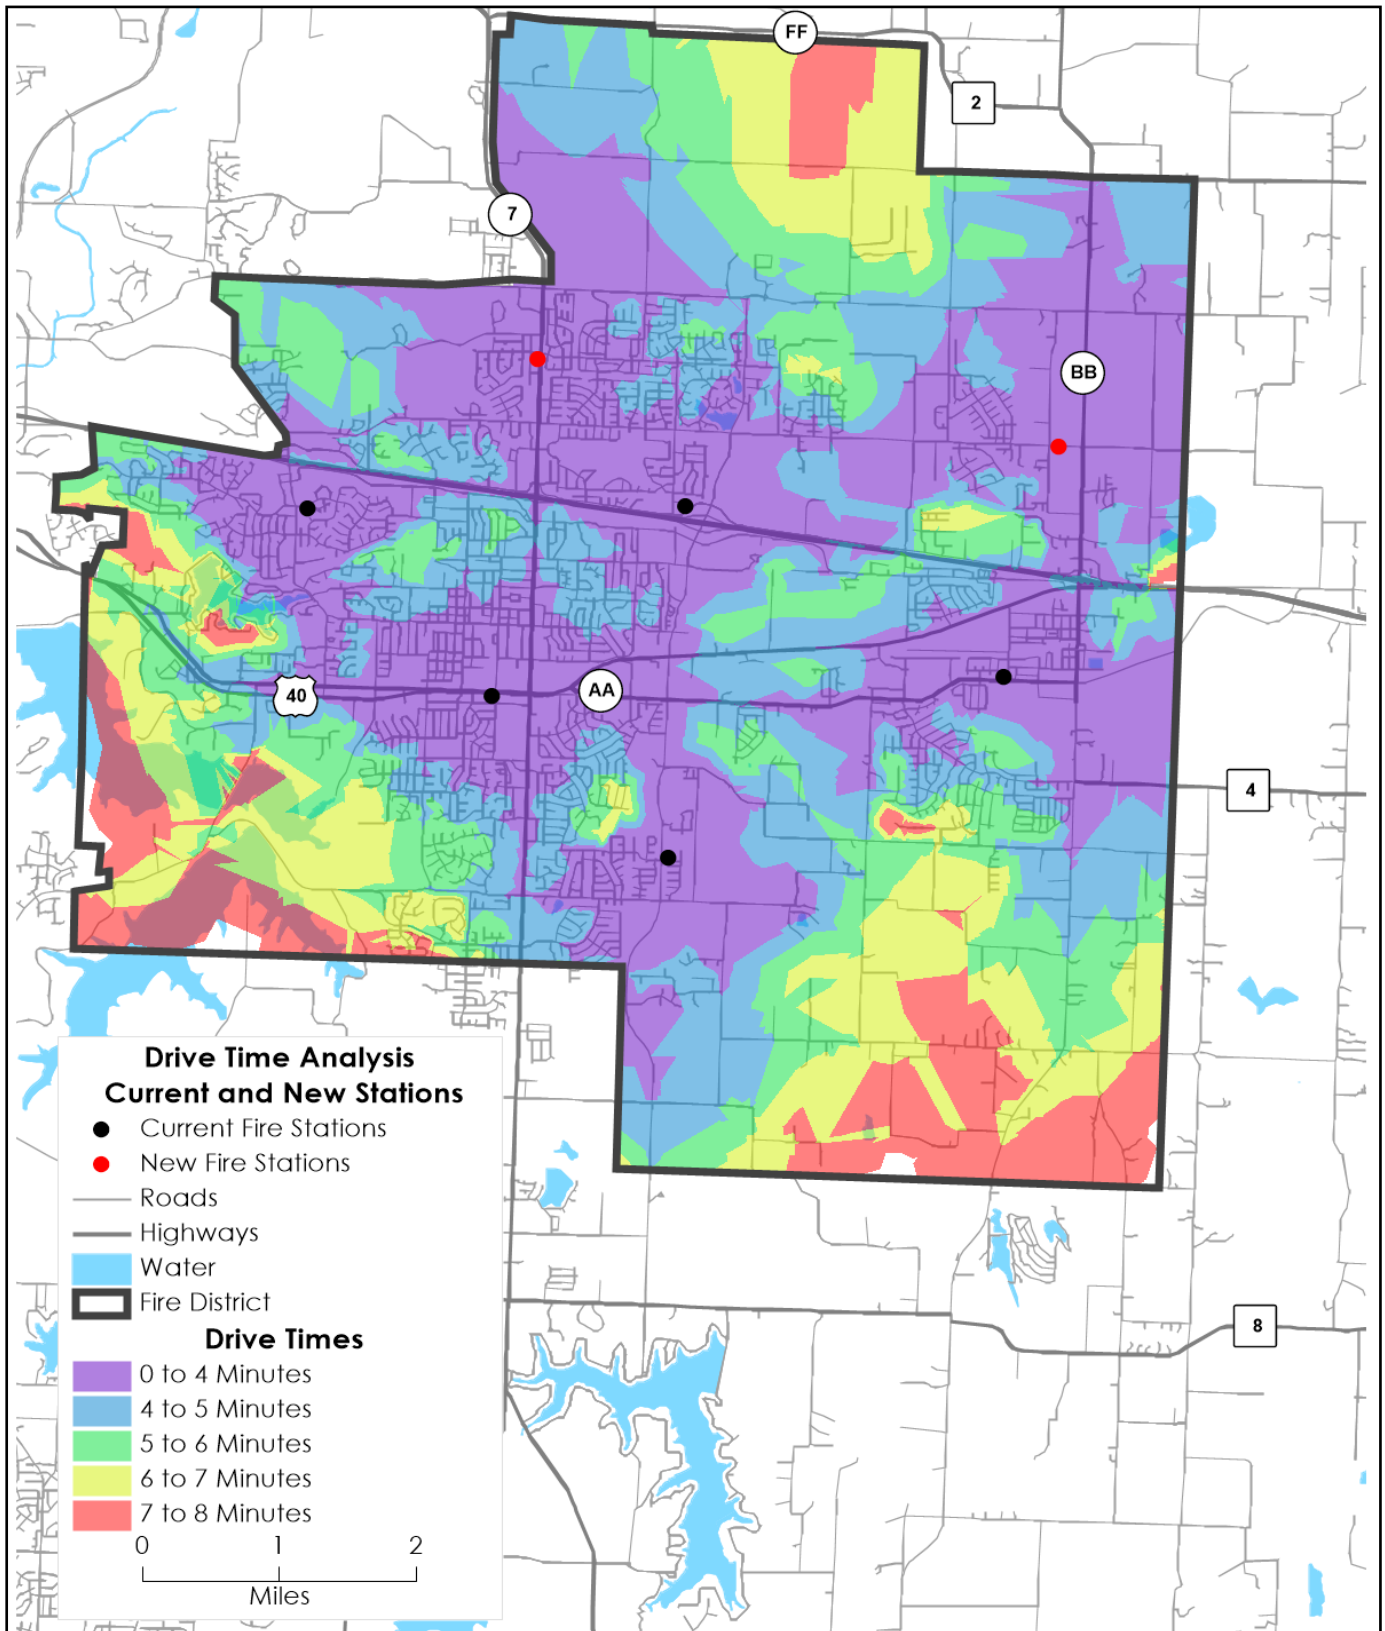

Figure 60. Current drive time analysis for CJCFPD based on all stations.

# Central Jackson County Fire Protection District

**Figure 61. Current drive time analysis for CJCFPD based on current stations and possible new stations. A service gap analysis was performed (see p. 74-79) and determined that two new stations could improve service areas in the district.**

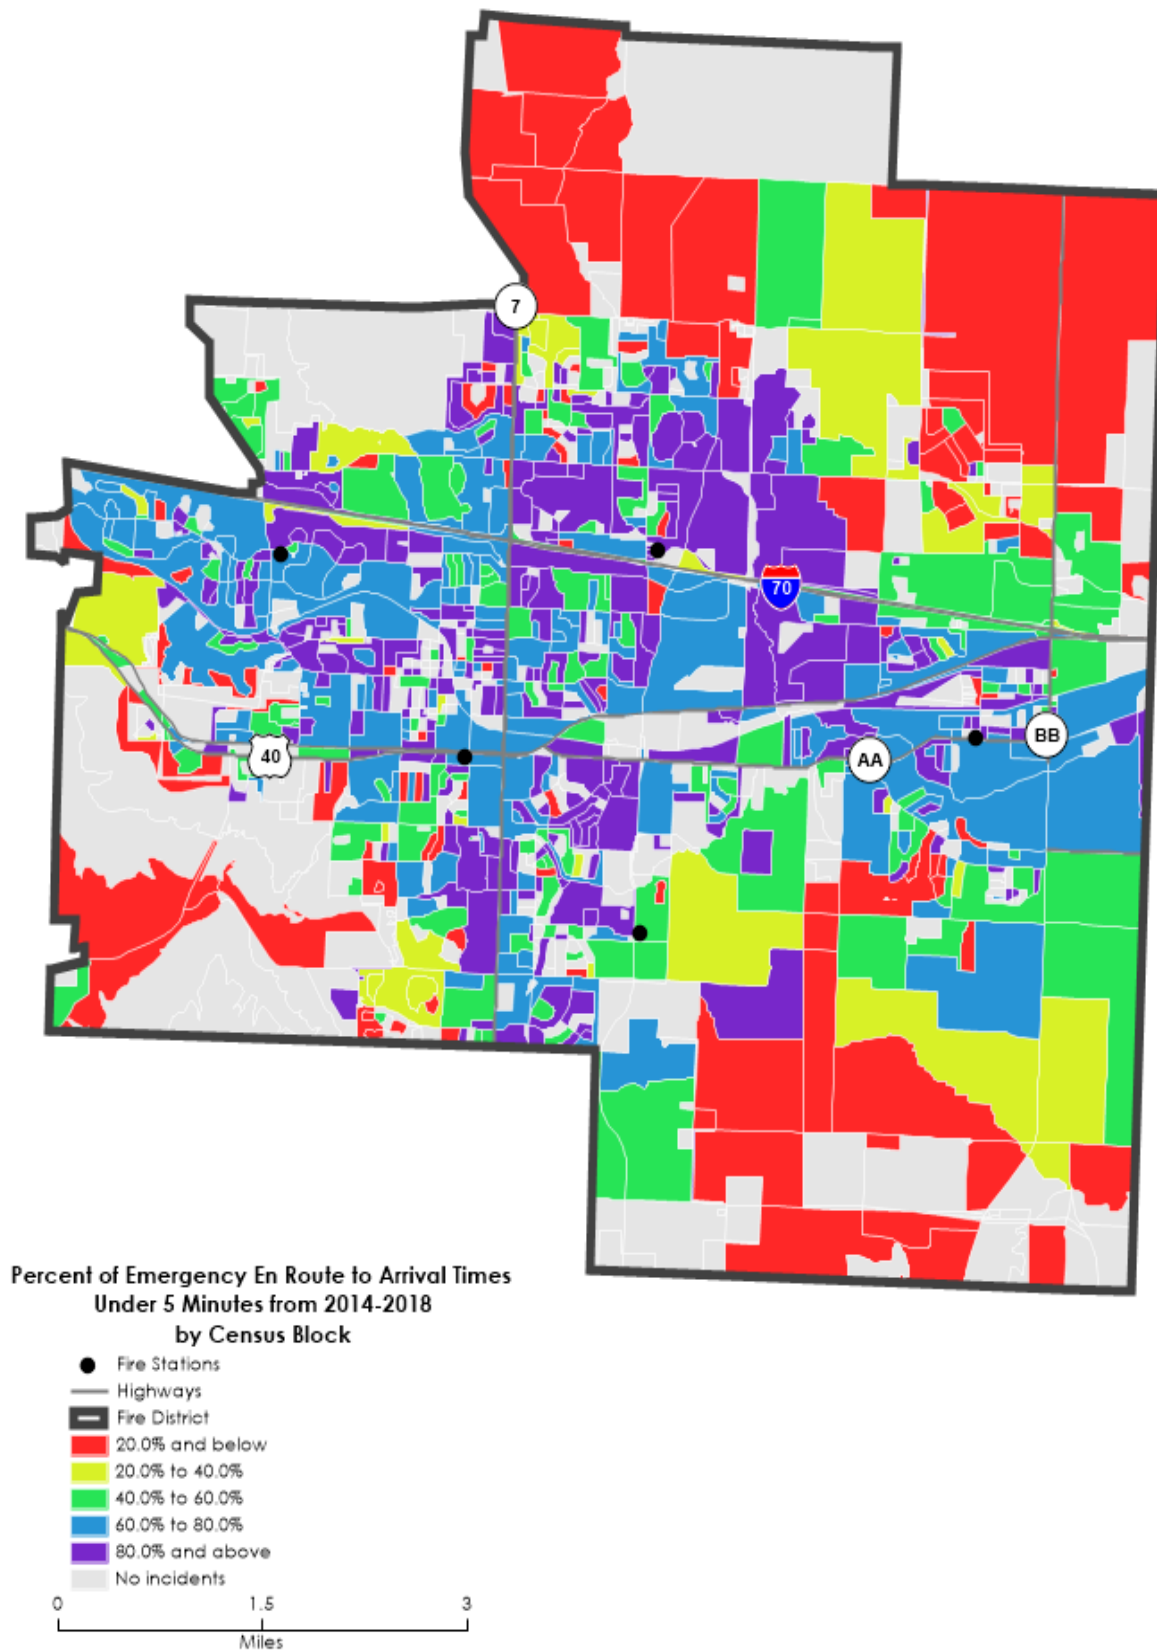

Figure 70. Percent of all En Route to Arrival times under 5 minutes, 2014-2018 in CJC FPD.

# Central Jackson County Fire Protection District

Below is a table showing the criteria used to analyze the risk of fire in the CJCFFPD. We developed this matrix ourselves based on the 11 factors shown below. All 11 factors were calculated for each Census block in the district, then a score was assigned. The map on p. 73 is the result, showing several areas in red where the fire risk level was high.

<b><u>Fire Risk Analysis</u></b>	
<b>Fire Risk Element</b>	<b>Score</b>
Major Employers	# of businesses with 100+ employees
Hospitals	# of hospitals
Schools & Child Care Facilities	# of schools & child care facilities
Infrastructure	# of infrastructure locations
Assembly Occupancies	# of occupancies
Populated Areas	0 = no population 1 = 1-1,000 population/sq mile 2 = 1,000-2,500 population/sq mile 3 = 2,500-5,000 population/sq mile 4 = 5,000+ population/sq mile
Populations Over 65	0 = no population 1 = 1-500 population/sq mile 2 = 500-1,000 population/sq mile 3 = 1,000-2,500 population/sq mile 4 = 2,500+ population/sq mile
Developed/Residential Areas (2016 National Land Cover Database)	0 = No residential 1 = 1%-25% residential 2 = 25%-50% residential 3 = 50%-75% residential 4 = 75%-100% residential
Drive Time to Closest Station	0 = 0-4 mins 1 = 4-6 mins 2 = 6-8 mins 3 = 8-10 mins 4 = 10+ mins
Poverty Areas	1 = 2%-3% unemployment rate 2 = 3%-4% unemployment rate 3 = 4%-5% unemployment rate 4 = 5%+ unemployment rate
Agency Fire Incident History	0 = no fire incidents 1 = 1-10 fire incidents/sq mile 2 = 10-50 fire incidents/sq mile 3 = 50-100 fire incidents/sq mile 4 = 100+ fire incidents/sq mile

<b>Risk Level</b>	<b>Risk Score</b>
Low	0-7
Medium Low	8-10
Medium High	11-15
High	16+

**Figure 71. Risk elements and assigned scores for the CJCFFPD.**

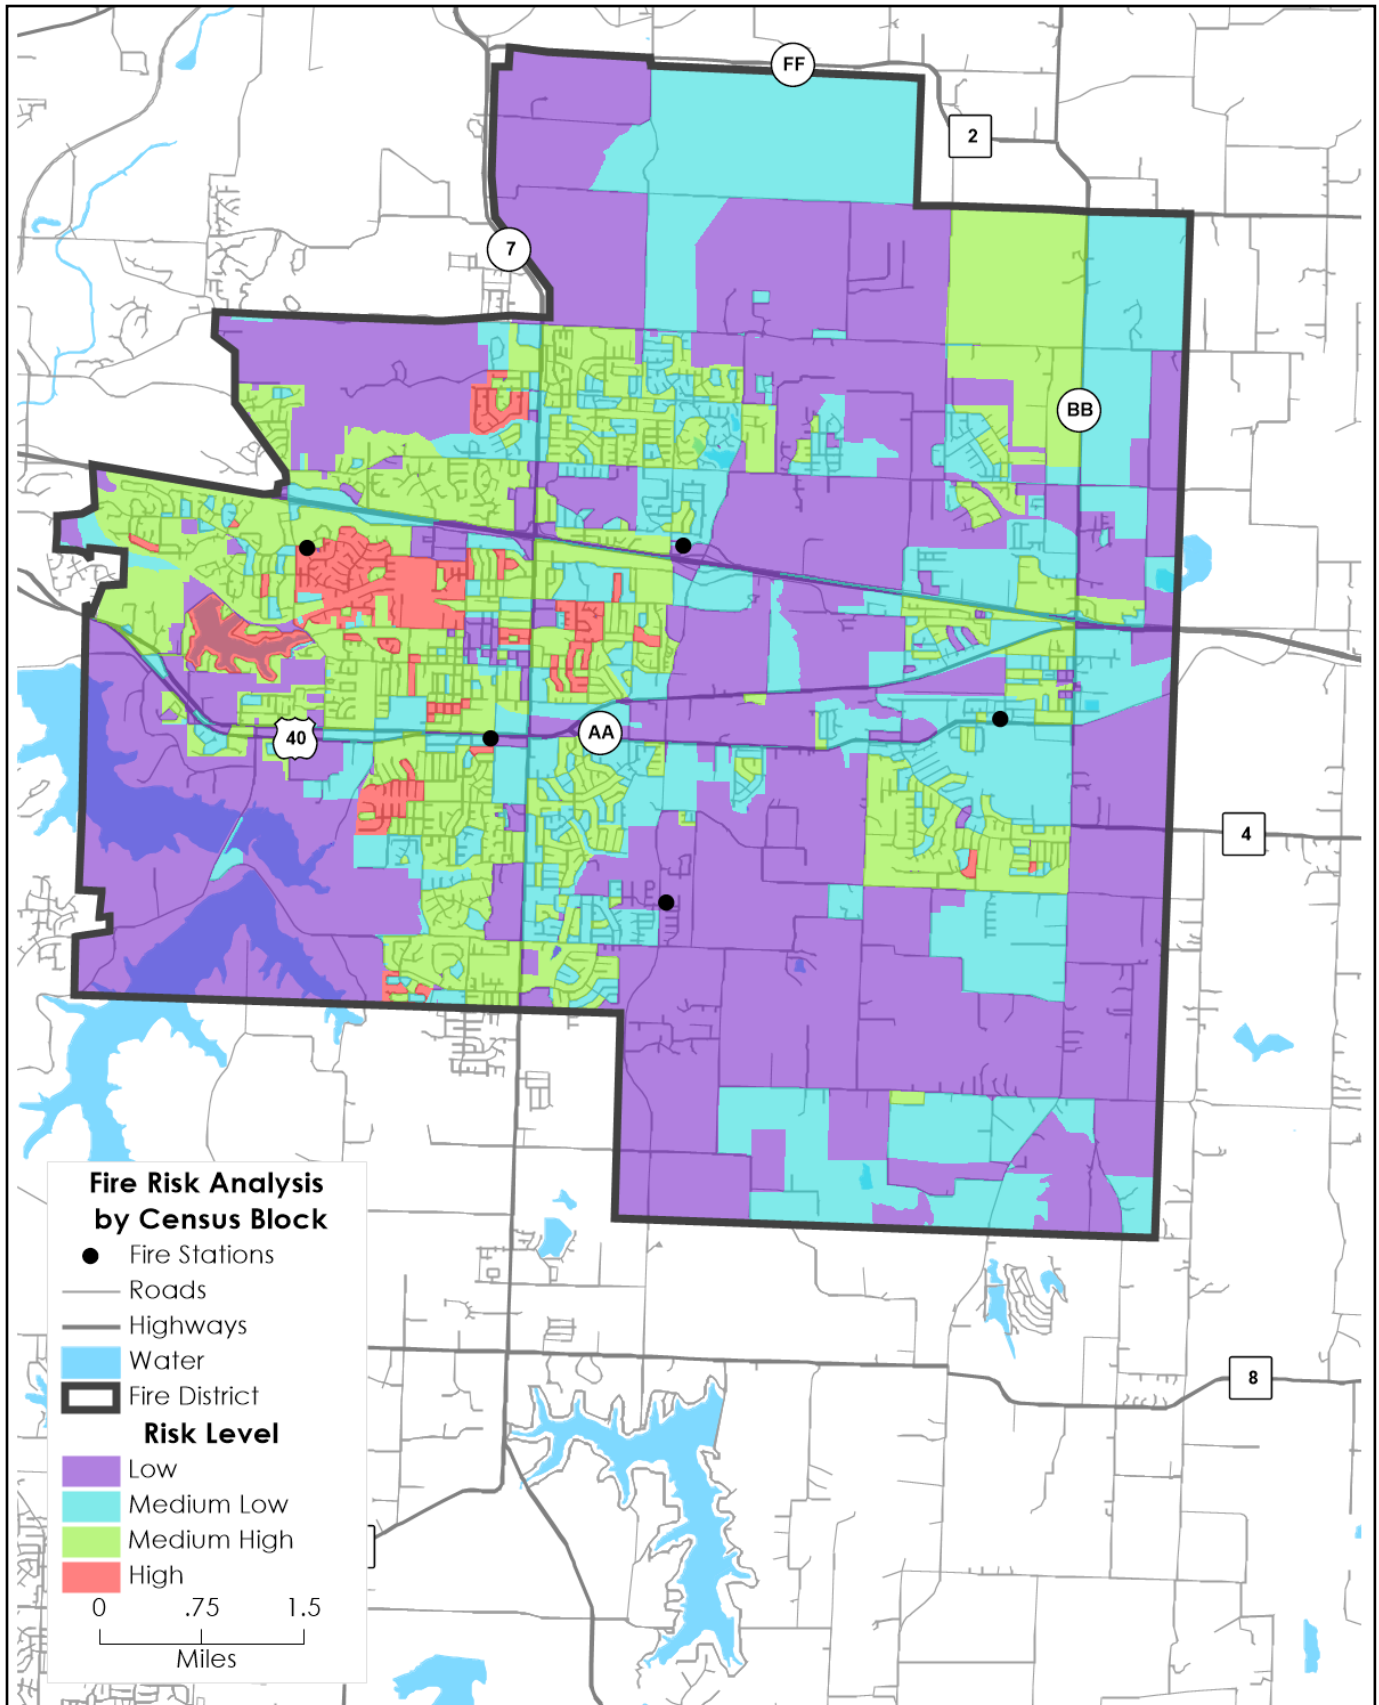

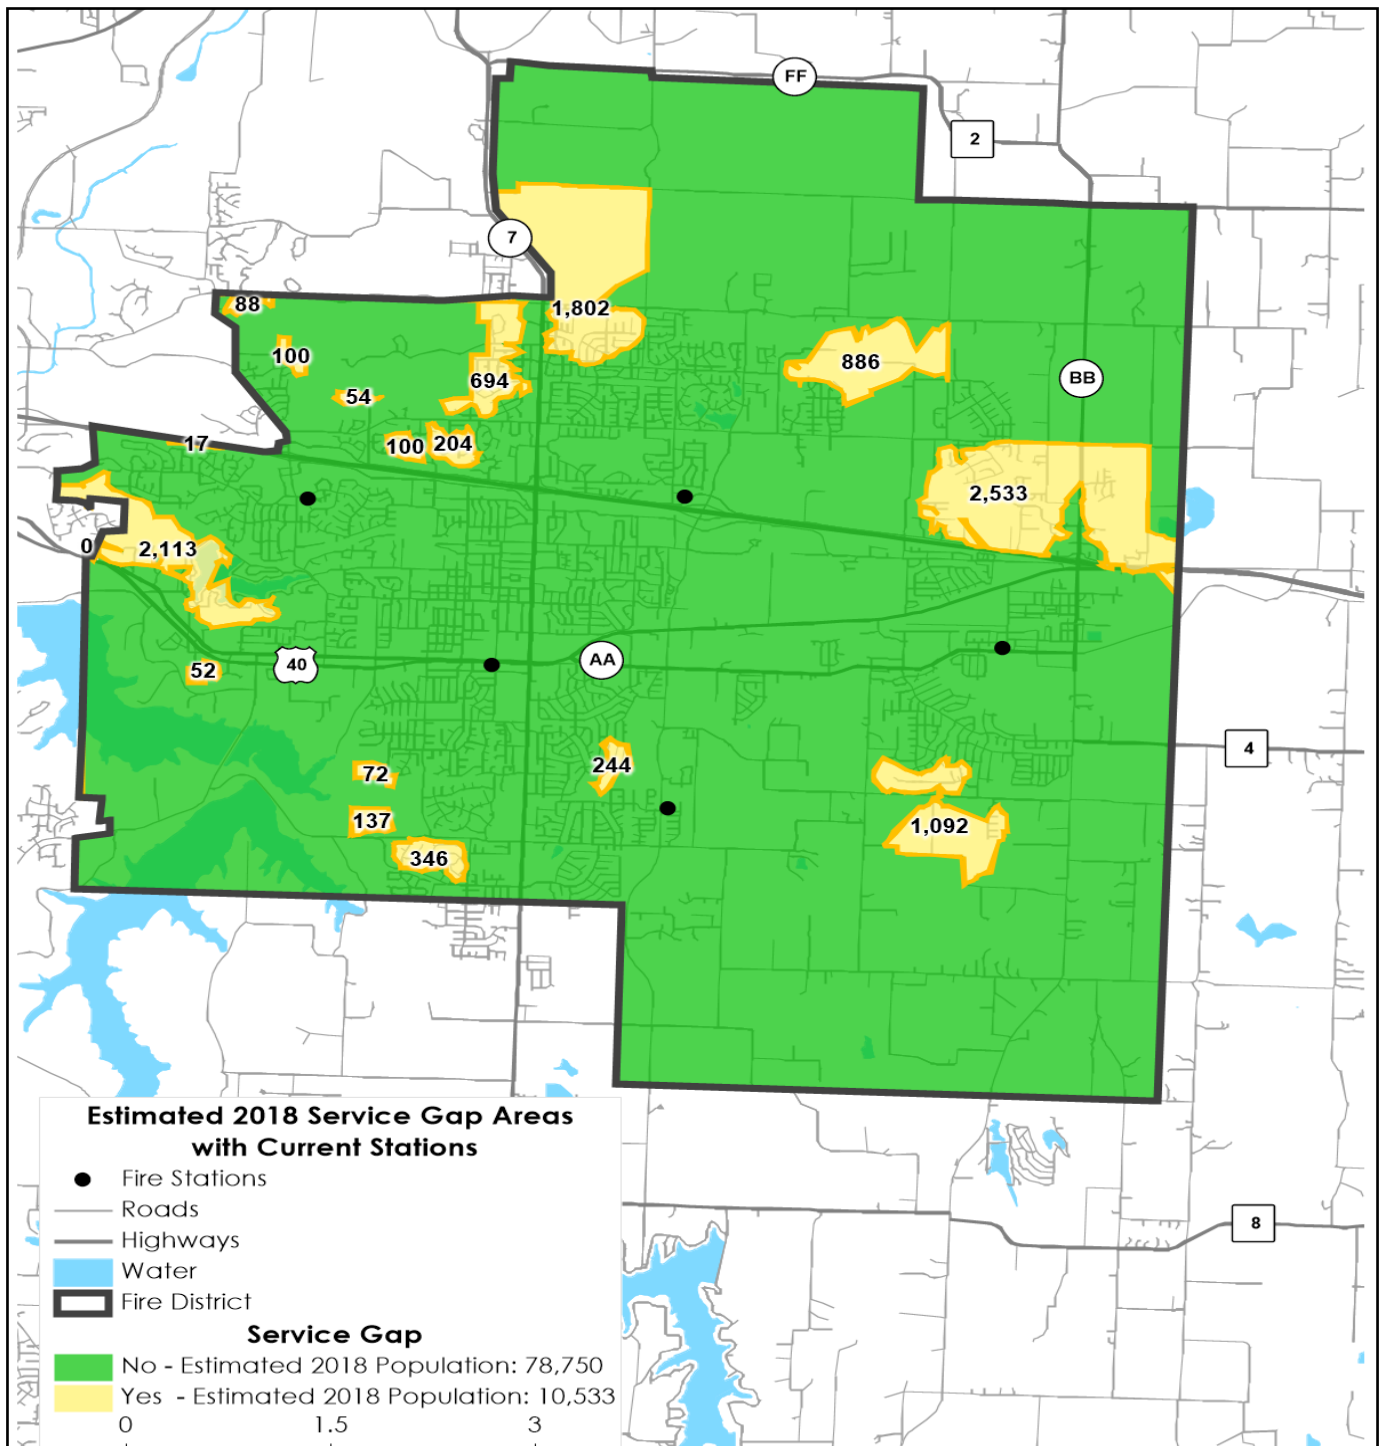

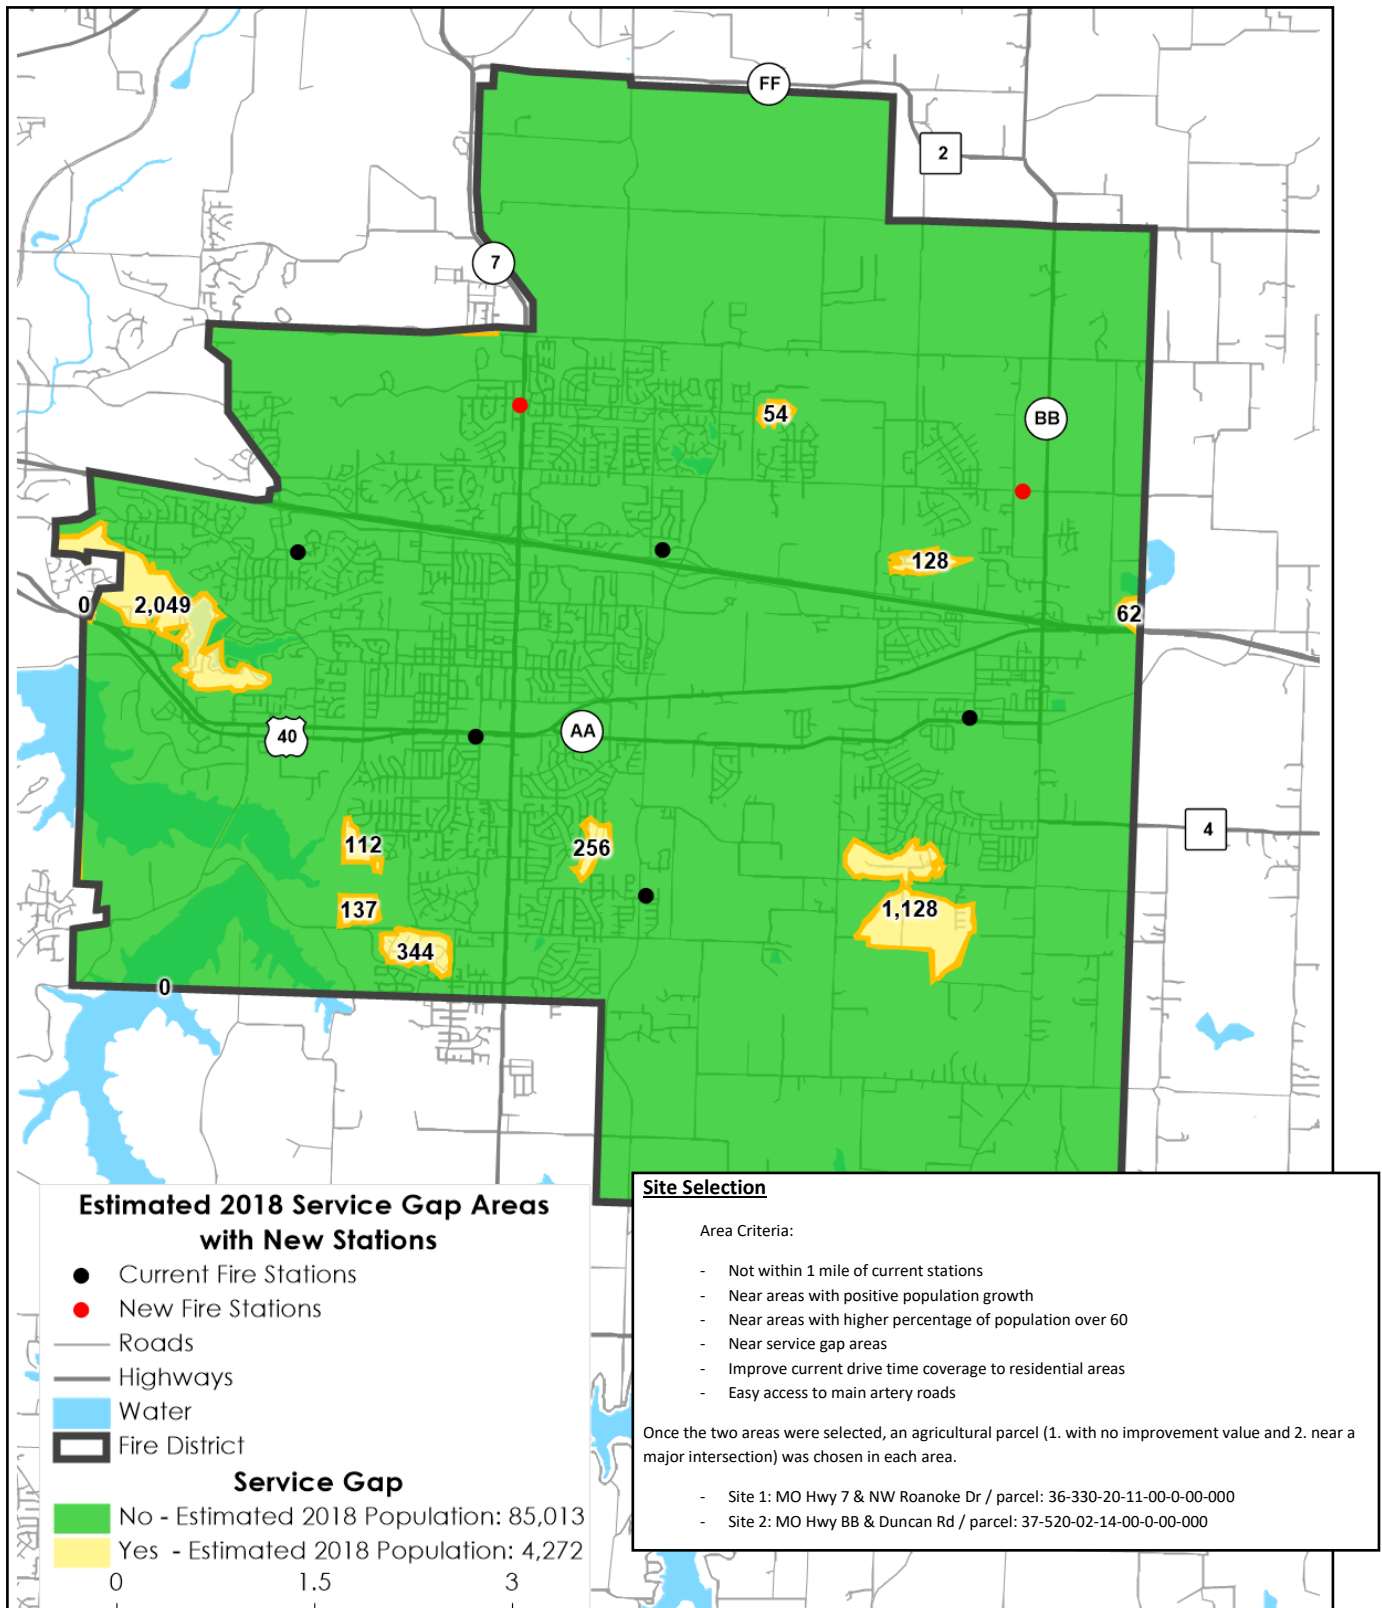

Figure 72. Fire risk analysis in CJCSPD by Census blocks.

# Central Jackson County Fire Protection District

**Figure 73. Estimated 2018 Service gaps (gold) with the current five stations. (Note: The black numbers in the unserved areas are the estimated populations. )** To determine service gaps, the population density was calculated for each Census block, then each block. For each population category, there is a travel time standard. The denser the population, the higher the risk of fire spreading faster and affecting a greater number of population, therefore, faster response times are needed for these areas. Drive time rings were then overlaid on top of the Census Block Groups to determine whether standard travel time was being met. If not, then it was considered a “service gap” area. If a Census Block Group was included in and outside a service gap area, the gap was estimated according to whatever percentage of that block group fell inside the service gap area. Service gaps are only estimates.

**Figure 74. Estimated 2018 Service gaps (gold) with possible new stations added. The Roanoke and Hwy 7 site is about 400 yards south of a previous station location. The parcel is currently on the tax rolls for only \$840, classified as agricultural. The other site is at the corner of Duncan Road and NW Rust Rd, and is on the tax rolls with a market value of \$4,013 for 8.19 acres of agricultural land.**

## Traffic Count

I-70 (Between Woods Chapel and 7 Hwy)	Average Daily Traffic	Peak Hour	Peak Traffic
Traveling West	48,329	4PM	3,758 (Per Hour)
Traveling East	47,023	4PM	3,332 (Per Hour)
7 Hwy (Between I-70 and Duncan Rd)	Average Daily Traffic	Peak Hour	Peak Traffic
Traveling South	14,186	5PM	1,104 (Per Hour)
Traveling North	14,512	6PM	1,281 (Per Hour)
40 Hwy (Between Woods Chapel and 7 Hwy)	Average Daily Traffic	Peak Hour	Peak Traffic
Traveling West	10,837	4PM	843 (Per Hour)
Traveling East	11,524	4PM	816 (Per Hour)

Main roadways in Blue Springs. Busiest hours of the day are between 4-6 PM

Figure 81. Motor Vehicle Accidents vs MDOT traffic counts for the CJCFPD, 2017. Data was retrieved from the Missouri Department of Transportation. Records are the average annual daily traffic volume for 2017.

Figure 82. MVA vs MDOT traffic counts for the CJCFPD, 2017. (See note below)

The motor vehicle accident count shared a very similar path with the traffic count. As traffic increased so did MVA count with highest being between 4-6PM. (Example above uses traffic count data from 7 HWY between I-70 and Duncan road vs the MVA count by hour).

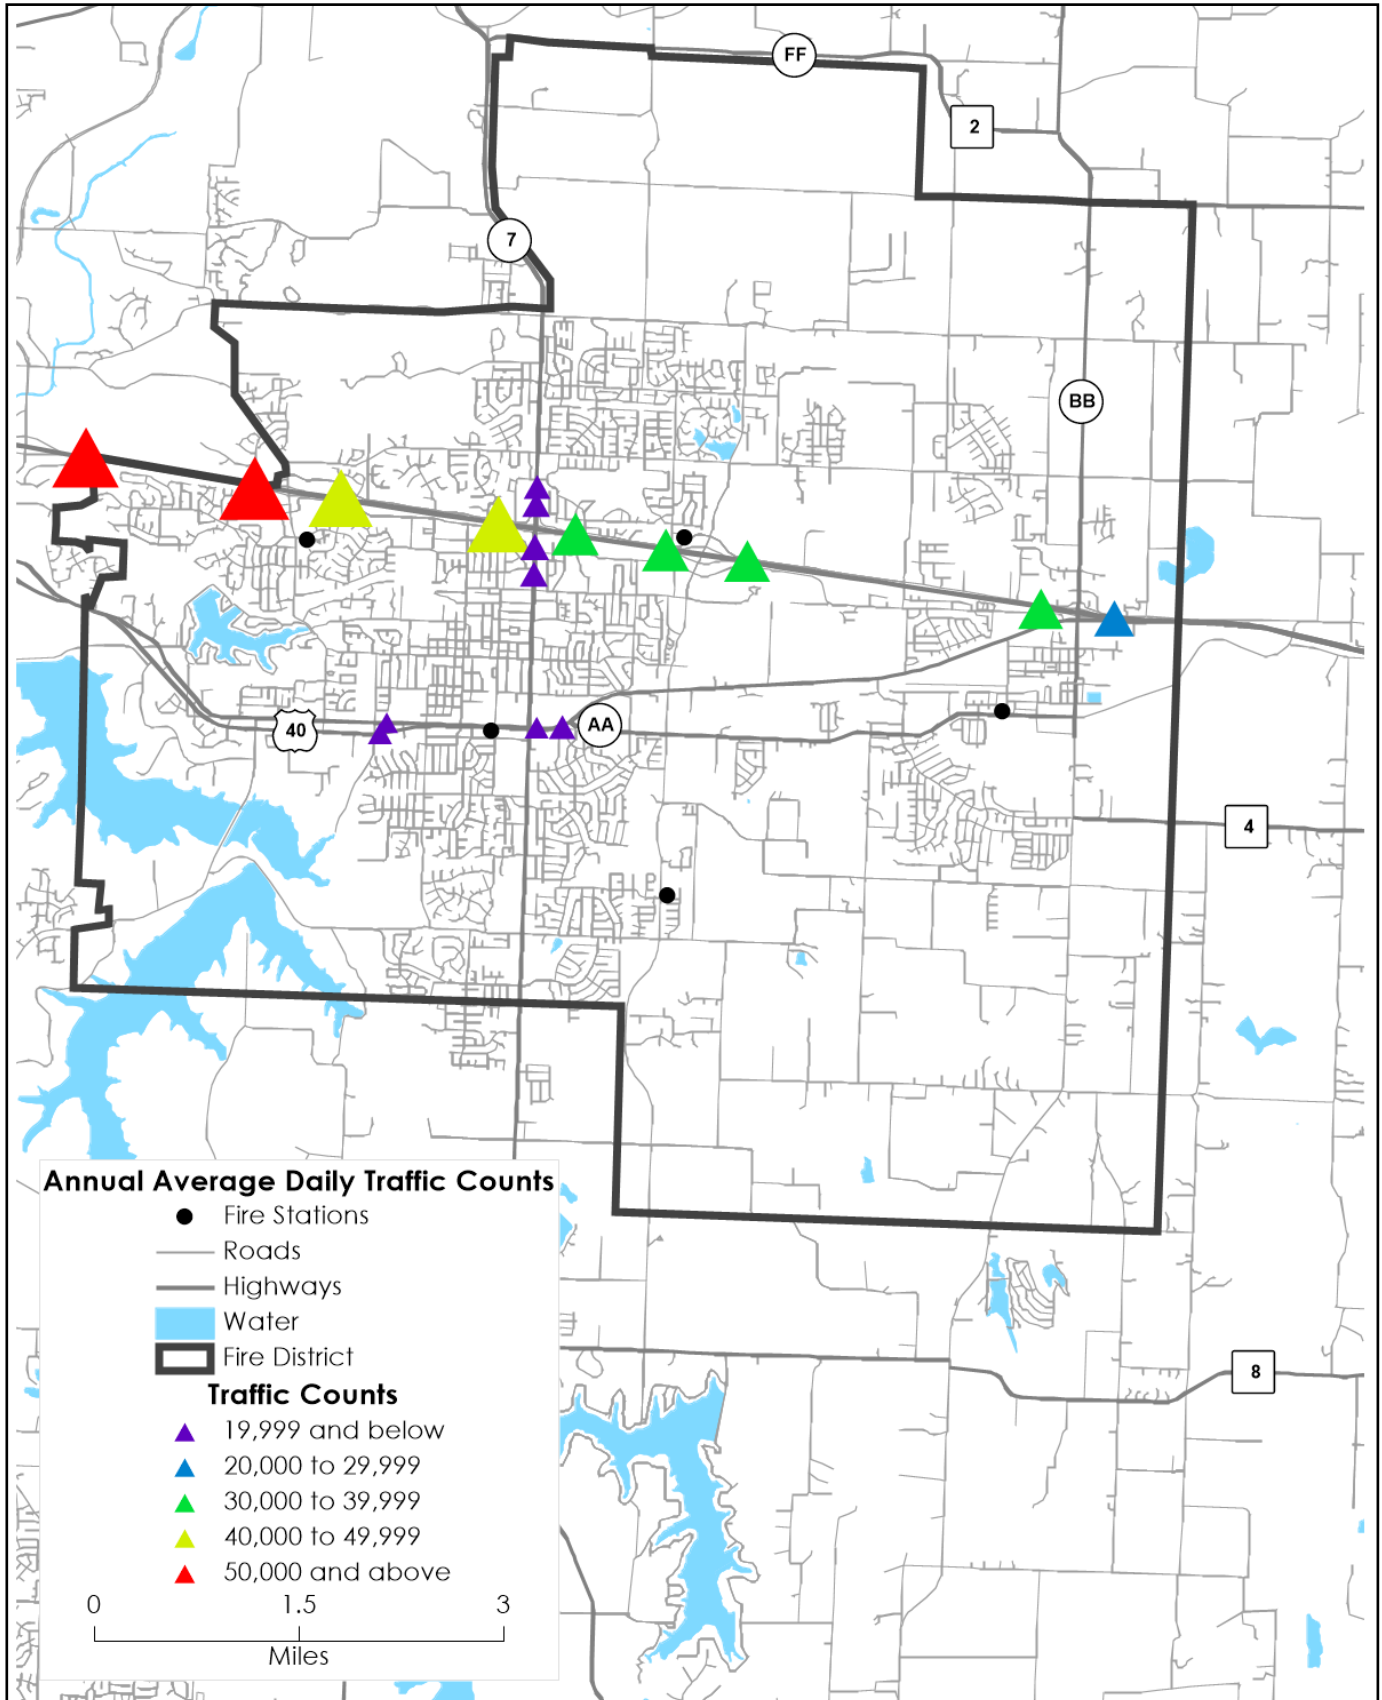

Figure 83. Missouri Department of Transportation traffic counts for the CJCFPD, 2017.

Smoke Detectors Installed	43	3,045	NA	192
People trained in CPR	102	179	2,000	499

**Figure 173. Comparison between the CJCFPD and the O'Fallon, Missouri, Lee's Summit, and Olathe, Kansas fire protection districts. When the CJCFPD is compared with two similar departments, a couple of factors leap out. For one, Olathe has a population twice that of CJCFPD, but only 61 percent more incidents. Secondly, Olathe has made building inspections a way to generate about one-third of their revenues, when their building codes administration department for the city was incorporated into the fire department organization. Also, Olathe and O'Fallon both have higher populations than CJCFPD, but the same number of apparatus. O'Fallon has significantly fewer total firefighters with total expenses of about half that of CJCFPD. Lee's Summit has almost the identical level of expenses, but more than 30 firefighters more than CJCFPD, and two more apparatus units, and serve a population of more than 25,000 persons. As a note, Olathe does not run ambulances.**

## OUR CORE VALUES

**Integrity**—We tell the truth even when it isn't popular. Our word is our bond and we will do what we say.

**Hard Work**—It is an honor to serve your fire department. We will work hard to earn and keep your trust.

**Quality**—Our demographic studies have more data, more information and more analysis than is produced by any other firm in the country.

**Innovation**—We are always trying to find new ways to gather and present better information.

**Accountability**—We realize that your administrators rely on our data for staff hiring, station construction and long-range planning. If we are wrong, the decisions made can cost taxpayers millions of dollars. That is why we take our responsibility for providing the most accurate information possible very seriously.

**Business Information Services, LLC** is a Missouri-registered Limited Liability Corporation, owned by Preston Smith of Blue Springs, Missouri.

Smith has an undergraduate journalism degree from the University of Missouri and a Master's in Public Administration from the University of Missouri-Kansas City, with a specialization in statistics and quantitative analysis. Certified GIS analyst Sarah Rose developed the maps and the geospatial analysis for this study. Data analyst Jason Smith prepared the tables, charts, graphs and initial report structure.

Smith consults with school districts around the country and has prepared more than 200 demographic analysis studies for school districts and completed 300 total projects for school districts.
